

Agentic RAG System Using CrewAI

The project implements a multi-agent question answering system using CrewAI.

Agents:

1. Manager Agent

The Manager Agent understands user questions, selects the correct specialist agent, and combines multiple answers.

2. PDF RAG Agent

The PDF RAG Agent answers questions from uploaded PDF documents.

Process:

- Extract PDF text
- Split text into chunks
- Generate embeddings
- Store embeddings in FAISS
- Retrieve relevant chunks
- Generate answers

3. Web Search Agent

The Web Search Agent answers current information questions.

It uses search APIs and returns source links.

4. Weather Agent

The Weather Agent provides:

Temperature
Humidity
Wind Speed
Weather Condition

Vector Database:

FAISS is used to store document embeddings and perform similarity search.

Embedding Model:

all-MiniLM-L6-v2
